

01 / 07

I built an AI
Coach to help
become better
speakers.

**Most people
know what to say.**

**But struggle to say
it confidently.**

- Filler words that kill credibility
- Avoiding eye contact with the audience
 - Racing pace when nervous

SpeakUp AI Coach

An in-browser speaking coach that records you, transcribes your speech in real-time, and gives you an AI-powered score report in seconds.

Progress
charts

1. **Browser APIs are incredibly powerful** — MediaRecorder, Web Speech API, and MediaPipe WASM all run client-side with no backend
2. **Prompt engineering matters** — structuring LLM output as strict JSON took real iteration
3. **Camera permissions need graceful handling** — never assume the user has allowed access
4. **Design affects trust** — a clean UI makes users more willing to record themselves
